

Calling method

```
static async Task<int> ContentLengthAsync(Uri address) {
```

```
    using var client = new HttpClient();
```

```
    Task<string> getStringTask = client.GetStringAsync(address);
```

```
    DoSomethingUseful();
```

```
    string content = await getStringTask;
```

```
    return content.Length;
```

```
} static void DoSomethingUseful() {
```

```
    PrintThread("Doing something useful");
```

```
}
```

```
Task<string> HttpClient.GetStringAsync(Uri uri)
```
